

smartDOT  
protection against mobile phone radiation

Bio-energetics specialists Global EMF Solutions today launched smartDOT designed for use with mobile phones and other electronic devices. smartDOT is programmed to harmonise or retune electromagnetic radiation from electronic equipment.

The wireless world means we are all immersed in invisible electromagnetic emissions. There are now 7 billion mobile phone subscriptions worldwide and wi-Fi is everywhere. Many scientists are concerned that this 'electro-pollution' is affecting our health.

The human body is electromagnetic in nature. Each cell in our body acts like an antenna, an extremely sensitive receiver and transmitter of electromagnetic radiation; the body will 'pick up' and react to any field to which it is exposed. The human body has not had time to adapt to the artificial electromagnetic environment in which we now live.

Scientists around the world are increasingly concerned about these dangers and at the end of May 2011 the cancer research agency of the World Health Organisation reported that mobile phones are "possibly carcinogenic".

Christopher Wild, director of the International Agency for Research On Cancer, concluded that, "Given the potential consequences for public health of the classification and findings it is important that additional research be conducted into the long term, heavy use of mobile phones". He went on to advise, "It is important to take pragmatic measures to reduce exposure".

Reducing exposure is key and protecting yourself when you do use any devices is also worth considering. The smartDOT is programmed with powerful energy signatures known as Phi Technology®. The natural frequencies used in this programming harmonise or retune the emissions from the device and reduce it.

The smartDOT is a class 1 medical device and scientific research studies show that it protects against the potentially harmful effects of the electromagnetic frequencies (EMFs) emitted when we use electronic devices such as mobile phones, computers, cordless phones.

Managing Director Lucy Blyth commented "Many people feel frazzled after hours on computers & phones. We believe that the smartDOT is a breakthrough product. It is a truly cost effective way to relieve 'electro-stress'."
